Enrollments up 5% in 1985 after four years of no growth

By Paul V. Peterson

Although total enrollment for the nation's colleges and universities declined by approximately one percent in 1985[1], enrollments in schools and departments of journalism and mass communications rose by five percent.

For 1985, 175 schools reported a total of 82,766 majors, compared to 78,856 reported by 180 schools in 1984.

The five percent increase in journalism and mass communcations enrollment is significant for two reasons. One, it went against the general trend in colleges and universities for this period. Two, it marked a return to an upward trend in journalism and mass communications enrollment. By comparison, the increase in 1984 was slightly less than two percent.

As always, enrollment data reported in this article must be interpreted carefully. Not all schools that reported in the 1984 survey participated in the 1985 effort. And some schools that took part this year had not done so previously.

But if the data for schools that reported 500 or more majors this year are compared with data for the same schools in 1984, the same five percent increase is evident. This can be interpreted as a reasonable indication that the five percent increase would have held if the same schools had reported both years.

Although the numbers increased, there were no surprising changes in individual areas. The percentage of females has increased to 60 percent of the total. Minority enrollment has remained constant at approximately 9 percent. The percentage of students interested in news-editorial journalism (generally defined as daily newspapering) continues to drop, although the total number of such students remains relatively constant. For example, 20 percent of the undergraduates who were reported by sequence were concentrating in news-editorial, a decline from 24 percent in 1984 and 26 percent in 1983.

This survey involved 268 academic units that reported a major field of study in journalism or mass communications. A major is defined as someone who (1) is under the administrative control of such a unit, and (2) is preparing for future employment in the mass media. Such employment includes work in newspapers, magazines, public relations, advertising, broadcast journalism and photojournalism. The terms journalism and news-editorial are not considered synonomous, although many people still connect the two.

Michigan State is largest

Michigan State reported 3,890 majors, marking the fourth straight year that it reported more than 3,000 students. No other school approached that number, but Syracuse and California State University at Fullerton did exceed 2,000. Table 3 reports a 3-year comparison of all schools that reported more than 500 majors in the autumn of 1985.

Peterson, a professor in the School of Journalism at Ohio State, has conducted the annual enrollment survey of journalism and mass communication programs for more than 15 years.

Boston University again led in graduate student enrollment — 364. Missouri was second with 254, and Northwestern was third with 245.

Michigan State replaced Minnesota with the largest number of doctoral students reported. However, Illinois and Ohio reported the most doctoral degrees awarded (seven). The total number of Ph.D. degrees granted was 65, just one fewer than in 1984, but considerably fewer than the 94 reported in 1983.

Sequence data

In considering data about sequence enrollment, care must be taken to understand that they are trends to be viewed over time rather than just for 1985. For example, some schools do not list their students by sequence, and some have only one sequence in which all students are listed, regardless of their interests.

Advertising has now tied news-editorial in the percentage of total students (20 percent each). Radio-TV general is third and public relations is fourth. Several of the accompanying tables report the largest schools in each sequence.

Minority enrollment data, also shown in accompanying tables, are more incomplete this year than for the past several years, primarily because several of the large, historically black schools did not participate. However, enough schools did report minority data to reveal the fact that journalism and mass communications as a discipline is not attracting as many minority students as it should. However, minority enrollment is apparently down in all disciplines.

In sum, the trends of the past few years have continued. Total enrollment in journalism and mass communications has increased, an increasing number of students are interested in fields other than news-editorial and the number of minority students has not increased significantly.

Notes:
(1) The above figures are based on "degrees reported," and should not be construed as the same thing as degrees granted.
(2) Many schools do not report minority figures, and thus the totals are likely under the actual numbers.

See pages 54-60 for a complete report of enrollment by school.

1985 enrollments in journalism and mass communication

The data on the following pages summarize, by school and department, enrollments in journalism and mass communications in the autumn of 1985. The data were collected by Professor Paul V. Peterson of the Ohio State University.

The list of schools on the following pages differs considerably from the list of schools participating in the 1984 survey reported in the Spring 1985 issue of *Journalism Educator*.

The schools listed below appeared:

In 1984 but not in 1985

Bethany Nazarene	15
Breneau	122
Cal St, Long Beach	613
Cal Poly, Pomona	387
Cent. Washington	133
Columbia	185
DePauw	110
East. Kentucky	451
Florida Southern	253
Howard	750
Lehigh	40
Long Island	63
Maine at Orono	243
Mary Baldwin	31
Midwestern State	58
Mississippi	294
No. Florida	205
Point Park	280
Rider	189
Rhode Island	174
Rutgers, Comm	374
So. Florida	685
So. Ill. Ed'ville	270
So. Methodist	1047
SoEast Louisiana	63
St. Bonaventure	288
St. Mary-of-the-Woods	15
St. Michael's	81
Temple	930
Tenn., Martin	199
Tulsa	164
Valparaiso	125
Utica C	118
Washington U	492
